

7 Sports Vision Drills You Can Do at Home

Sharpen reaction time, tracking & focus - little to no equipment needed.

1

Wall Ball Reaction Toss

3 x 60 sec

TRAINS: REACTION TIME & HAND-EYE

Stand 3-5 ft from a wall. Throw a tennis ball off it and catch with one hand; alternate hands. Call the hand mid-air to add decision speed.

2

Near-Far Focus Shifts

3 x 20 shifts

TRAINS: FOCUS FLEXIBILITY

Hold a card with small text at arm's length; pick a distant target. Shift focus near-to-far as fast as you can stay clear.

3

DIY Brock String

3 x 1 min

TRAINS: CONVERGENCE & DEPTH

Thread 3 beads on a 5-ft string; anchor one end. Focus on each bead in turn; you should see the classic 'X' crossing.

4

Peripheral Catch

2 x 12 catches

TRAINS: PERIPHERAL AWARENESS

Fix your eyes forward. A partner tosses balls in from the edges of your vision; catch without looking directly.

5

Saccade Number Chart

3 x 30 sec

TRAINS: EYE TRACKING & SACCADDES

Tape two number columns on a wall a few feet apart. Read across, snapping your eyes (not your head) side to side.

6

Balance + Toss

2 x 45 sec/side

TRAINS: EYE-BODY COORDINATION

Stand on one leg and toss a ball hand to hand. Progress to eyes tracking the ball through a figure-8.

7

Fixation Hold

3 x 25 sec

TRAINS: GAZE STABILITY

Stare at a small target for 20-30 sec without drifting while you stay relaxed and breathe. Builds steady focus under fatigue.
